

Overall instructions for downloading the app

1. Go to the github at <https://github.com/maddox-lab/BlindSpot/tree/main>

2. From the main github page, go to the releases and hit +2 releases (seen above)
3. This should bring you to the following webpage. Click on the release which you want – windows or mac

5. Please go to the section depending on your Install

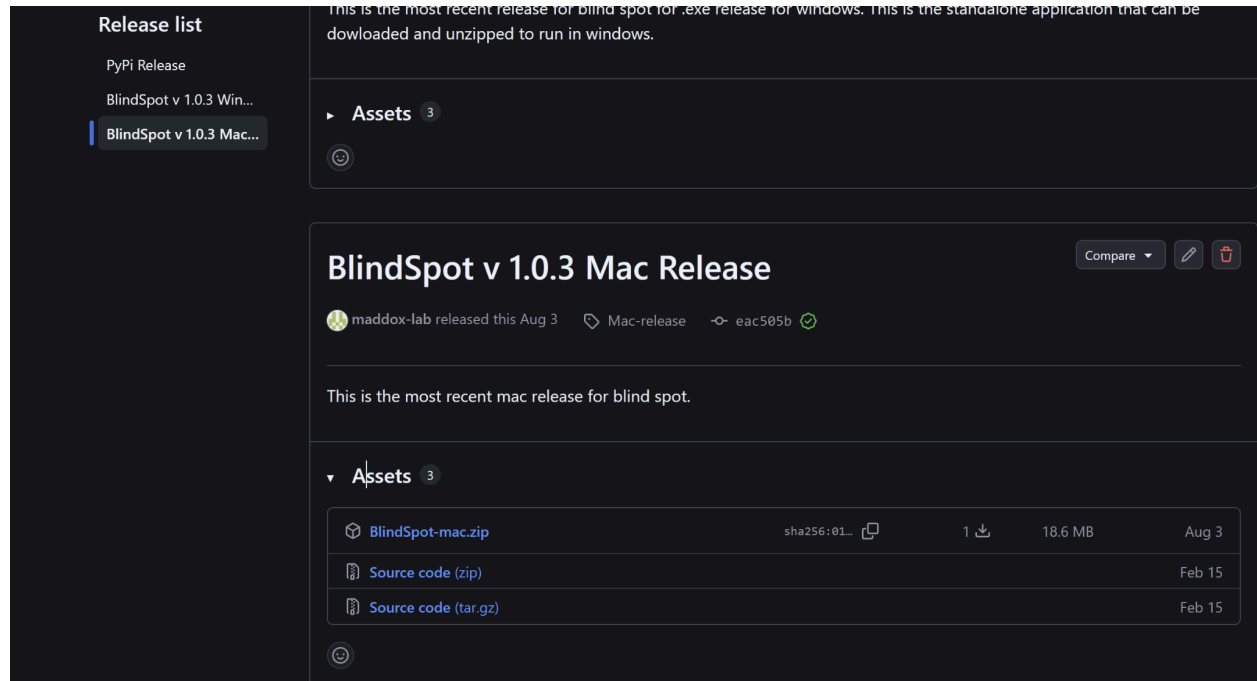

[Mac Installation instructions](#)

[Windows installation instructions](#)

[Command Line installation](#)

Mac Installation

1. Go down to the release section of the mac (which should be at the bottom on the page)

2. Go to the BlindSpot-mac.zip and hit download

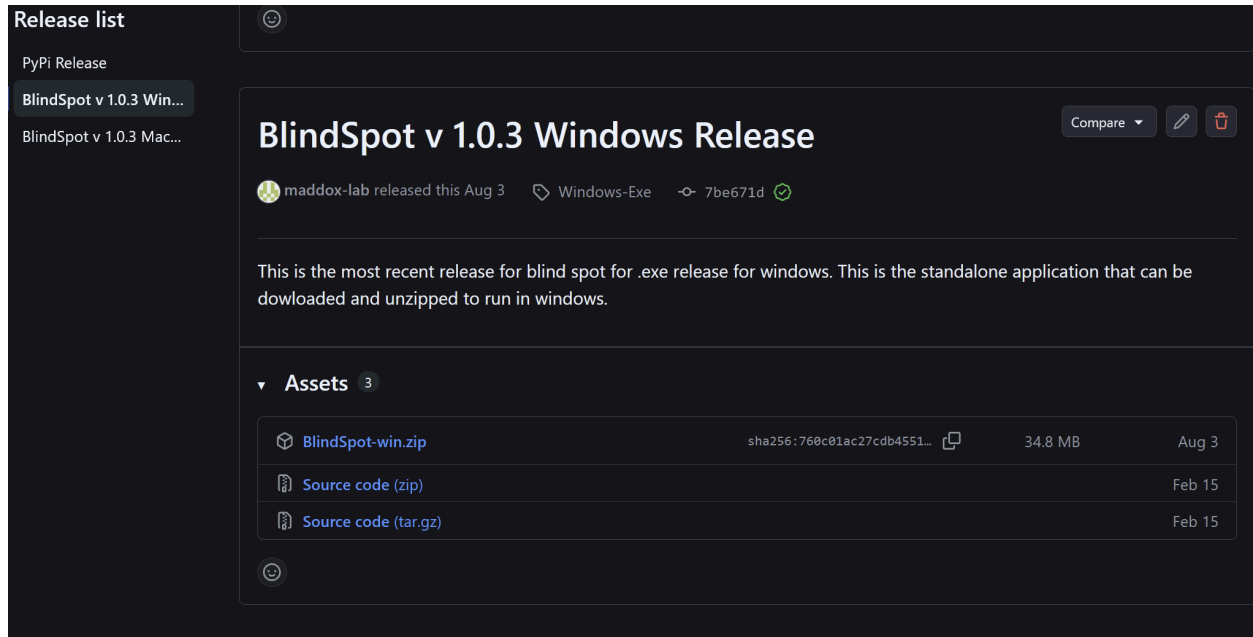

3. Double click the zip file downloaded to open it

4. It should install on your computer and you should have access to open it and search for it as an application

Windows Installation

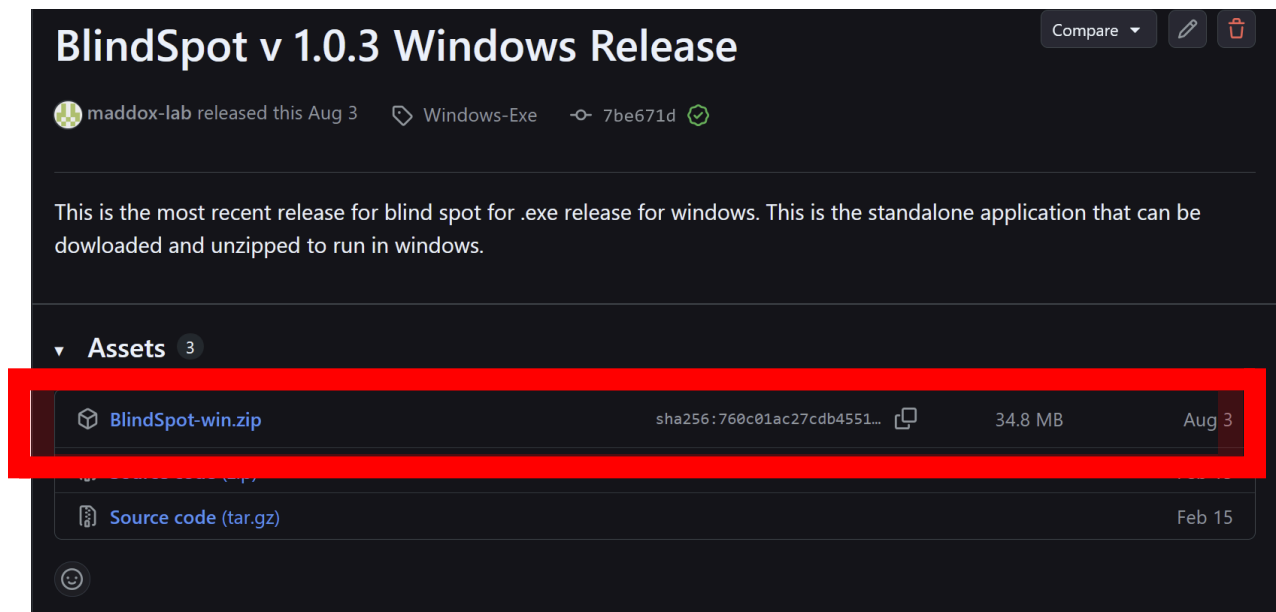

1. Navigate to the windows release page (half way down the page)

The screenshot shows the PyPI release page for 'BlindSpot v 1.0.3 Windows Release'. The left sidebar lists 'PyPi Release', 'BlindSpot v 1.0.3 Win...', and 'BlindSpot v 1.0.3 Mac...'. The main content area has the title 'BlindSpot v 1.0.3 Windows Release' and a description: 'This is the most recent release for blind spot for .exe release for windows. This is the standalone application that can be downloaded and unzipped to run in windows.' Below the description is an 'Assets' section with three items: 'BlindSpot-win.zip' (34.8 MB, Aug 3), 'Source code (zip)' (Feb 15), and 'Source code (tar.gz)' (Feb 15). The 'BlindSpot-win.zip' item is highlighted with a red box.

Asset	SHA256	Size	Date
BlindSpot-win.zip	sha256:760c01ac27cdb4551...	34.8 MB	Aug 3
Source code (zip)			Feb 15
Source code (tar.gz)			Feb 15

2. Go to the BlindSpot-win.zip and hit download

This screenshot is a closer view of the 'Assets' section from the previous image. It shows the 'BlindSpot-win.zip' file with its SHA256 hash, size (34.8 MB), and date (Aug 3). The file name and the date are highlighted with a red box.

Asset	SHA256	Size	Date
BlindSpot-win.zip	sha256:760c01ac27cdb4551...	34.8 MB	Aug 3
Source code (zip)			Feb 15
Source code (tar.gz)			Feb 15

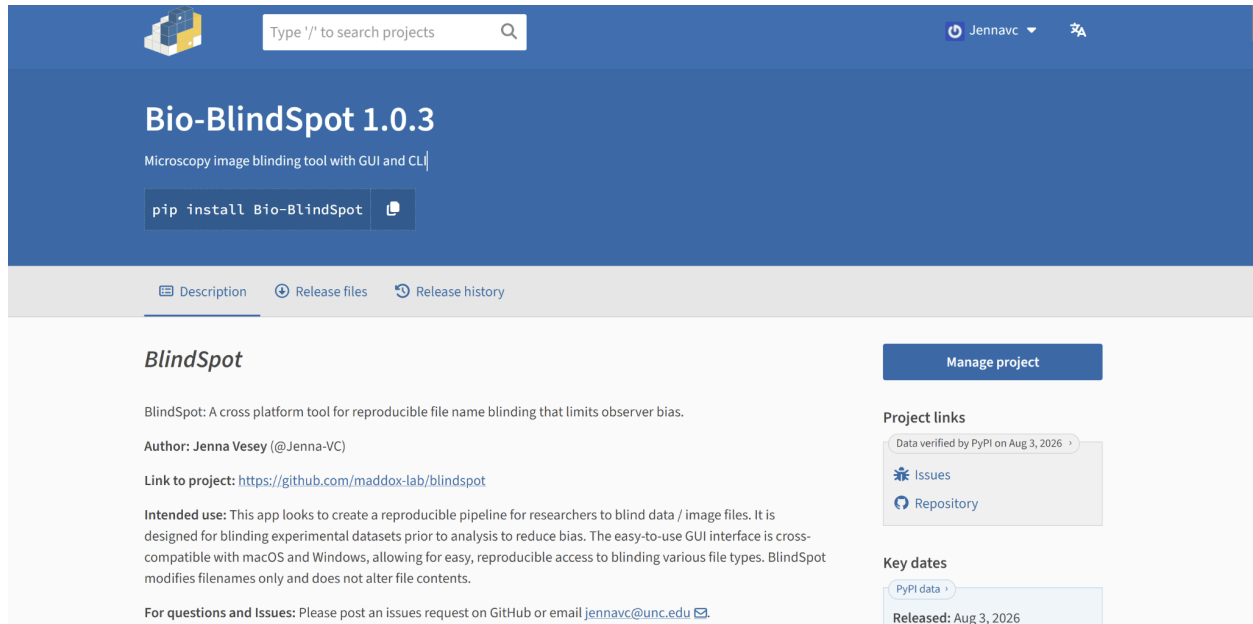

3. Double click the zip file downloaded to open it

4. It should install on your computer and you should have access to open it and search for it as an application

Command Line installation

1. Navigate to <https://pypi.org/project/Bio-BlindSpot/>

The screenshot shows the PyPI project page for Bio-BlindSpot 1.0.3. The page has a blue header with the project name and version. Below the header, there is a search bar and a navigation menu with links to Description, Release files, and Release history. The main content area is divided into two columns. The left column contains the project description, author information (Jenna Vesey), a link to the GitHub repository, and the intended use. The right column contains a 'Manage project' button, project links (Data verified by PyPI, Issues, Repository), and key dates (Released: Aug 3, 2026).

Bio-BlindSpot 1.0.3
Microscopy image blinding tool with GUI and CLI

`pip install Bio-BlindSpot`

BlindSpot

BlindSpot: A cross platform tool for reproducible file name blinding that limits observer bias.

Author: Jenna Vesey (@Jenna-VC)

Link to project: <https://github.com/maddox-lab/blindspot>

Intended use: This app looks to create a reproducible pipeline for researchers to blind data / image files. It is designed for blinding experimental datasets prior to analysis to reduce bias. The easy-to-use GUI interface is cross-compatible with macOS and Windows, allowing for easy, reproducible access to blinding various file types. BlindSpot modifies filenames only and does not alter file contents.

For questions and Issues: Please post an issues request on GitHub or email jennavc@unc.edu

BlindSpot - The Amy Shaub Maddox Lab
Version: 1.0.3

Command Line Usage:

blindspot                                Open the GUI
blindspot --blinder [options]           Blind files from the command line
blindspot --unblinder [options]         Unblind files from the command line

Blinder options:
--base_path PATH                        Folder containing files to blinded (required)
--extension EXT                        File extension to blind, e.g. nd2 (required)
--move_to_blind                        Move files to a 'Blind Files' folder
--clone_orig                           Copy originals before blinding (safe mode) *Recommended*
--include_subdirs                      Include subfolders within specified directory

Unblinder options:
--base_folder PATH                    Folder containing blinded files (required)
--blinding_key PATH                   Path to Blinding_Key.csv (required)
--move_unblind_to PATH                Destination folder for unblinded files
--overwrite                           Overwrite existing files
```
